BEFORE

THE PUBLIC SERVICE COMMISSION

OF SOUTH CAROLINA

Docket No. 2003-295-W

PREFILED
TESTIMONY
OF DAVID SHOEMAKER
FOR PETITIONER

JAN 16 2004

In re: Application of Georgia Water and Well Services,)
Inc. for approval of a new schedule of rates and charges for water service provided residential customers in Timberlake I and Timberlake II Subdivisions and Port Bass I and Port Bass II Subdivisions, Oconee County, South Carolina

Mr. David Shoemaker, being duly sworn, testifies as follows.

1 Q. Please state your full name and address.

S. C. PUBLIC SERVICE COMMISSION

- 2 A. David A. Shoemaker, 245 Christa Lane, Athens, Georgia.
- 3 Q. On whose behalf are you testifying?
- A. I am testifying on behalf of Georgia Water and Well Services, Inc, which is
- the Applicant or Petitioner herein. I serve as Secretary/Treasurer of the Company.
- The Company purchased Water Systems, Inc. in January 1993, and has been
- providing service under fixed rates and charges approved for Water Services, Inc.
- by the South Carolina Public Service Commission in its Order No. 89-1131, dated
- 9 December 12, 1989, in Docket No. 89-232-W.
- 10 Q. What is the purpose of your testimony?
- 11 A. The purpose of my testimony is to provide an overview of Petitioner's
- 12 Application and financial condition, describe the Exhibits thereto, and sponsor
- those Exhibits.

SERVICE: OF Obe

Q. Were the Application, Exhibits, and this testimony prepared by you or 1 under your direct supervision? 2 Yes. 3 A. 4 Q. When was Georgia Water and Well Services, Inc. established? January, 1987. 5 A. Q. Who owns Georgia Water and Well Services, Inc.? 6 7 A. Charles F. Carson and David A. Shoemaker. 8 Q. What is the Company's primary purpose? 9 A. Its primary purpose is to supply water to four different subdivisions in Oconee 10 County, South Carolina and several subdivisions in Georgia. Q. How much do you charge for water? 11 We charge a flat rate of \$15.75 per month, pursuant to the rates established by the 12 A. Public Service Commission in 1989. 13 Q. What do you charge to tap on to the system? 14 15 A. The current tap fee is two hundred fifty (\$250) dollars. Is there a disconnect/reconnect fee? 16 Q. While there is no separate disconnect fee, we charge a reconnect fee. If a 17 A. customer is disconnected for nonpayment or if a customer requests that we 18 disconnect during the off season, we charge one hundred twenty-five (\$125) 19 dollars to reconnect to the System. 20 21 Q. For which subdivisions does the Company supply water? We supply Port Bass I, Port Bass II, Timberlake I, and Timberlake II. 22 A.

2	A.	These are recreational communities with a portion being permanent residents and
3		middle class neighborhoods.
4	Q.	Where are those properties located primarily?
5	A.	On the shores of or near Lake Hartwell in Oconee County, South Carolina.
6	Q.	What percentage are recreational properties and what percentage are
7		residential properties?
8	A.	Approximately seventy percent are recreational weekenders and thirty percent
9		live there full time.
10	Q.	Are there any meters currently in this system?
11	A.	No.
12	Q.	How many customers does Georgia Water and Well Services, Inc. now have
13		in these areas in its system?
14	A.	We now have four hundred forty-five (445) residential customers and two (2)
15		commercial customers.
16	Q.	Is this Application for rate relief the first one Georgia Water and Well
17		Services, Inc. has applied for since its rates were established by this
18		Commission in December 1989?
19	A.	Yes.
20.	Q.	So your rates, then, have been set at this \$15.75 flat rate for the past 14
21		years?
22	A.	That's correct.
23	Q.	With this authorized rate for the test year for the 12 months ending

What types of subdivisions or neighborhoods are they?

Q.

- December 31, 2002, what has the Company's experience been? As shown in the narrative of our Application and Exhibit A thereto, the Company A. 2 3 experienced a net loss of \$61,340.32. Its experience in 2003 worsened somewhat. Subject to auditing, the Company experienced a net loss of approximately \$63,000 in 2003. 5 Please describe the type of water system that the Company uses to supply Q. 6 water to its customers. 7 We use wells, drilled wells, and hydro-pneumatic tanks as storage. 8 Α. Is this System tapped on to any other source of water, other than drilled 9 Q. wells? 10 Yes. We have a backup meter at Port Bass I and Timberlake I, where we can 11 A. purchase water from Pioneer Water Authority, if needed. 12 Is there any other source of water available, other than drilled wells? Q. 13 No. Α. 14 Please describe what Georgia Water and Well Services, Inc. has invested into Q. 15 these systems. 16 As shown in our Balance Sheet (Exhibit D) and Depreciation Schedule (Exhibit A. 17 E), we have over \$200,000 in the wells, water lines, and pumping facilities. In 18 2000 we spent over \$17,000 re-doing every pump-house and re-coating all hydro 19 tanks. In 2002 we extended the water main at Port Bass I to connect to the Pioneer 20
- Q. What kinds of upgrades have you made to the systems?

21

water system for back-up water at a cost of over \$11,000.

A. Every pump station has been re-done. The wells have been flow tested, and the correct size pumps have been installed. The tanks have been re-coated and new tanks have been added to all the systems. Every time we reconnect or disconnect a customer we replace the associated cut off valve with a new brass curb stop. We have replaced many main line shut off valves and added a flushing hydrant to Port Bass I. As I previously mentioned, we have connected Port Bass I to Pioneer Water Authority for back-up water service in case of power outage or low pressure problems.

A.

A.

Q. You have testified that Georgia Water and Well Services, Inc. has 445 residential customers. How many new residential customers did you acquire in 2003?

None, although we have added 2 commercial customers, which are currently only paying our approved flat residential rate. Most of the lots in these subdivisions have been sold for a good while. Many owners have purchased adjoining lots to combine with their existing property, which, in effect, eliminates the possibility of additional taps.

Q. In light of the Company's operating experience, what rates is it proposing?

As shown in Exhibit B of our Application, we are requesting approval of a monthly flat rate per residential tap of \$29.25 (plus DHEC fee) and approval of a basic charge of \$26.25 (plus DHEC fee) upon metering that tap (by subdivision) for the first 5,000 gallons and a commodity charge of \$3.50 per each additional thousand gallons. We are also proposing to increase the authorized residential tap fee to \$670 from \$250, based upon the justification set forth in Exhibit E of

the Application, and leave the disconnect/reconnect fee at the current \$125 level. Finally, we are requesting approval of a commercial metered rate and tap fee, 2 based on DHEC Single Family Equivalent (SFE) loadings. 3 If the <u>flat</u> rate is increased from \$15.75 to \$29.25, what would be the income 4 O. of Georgia Water and Well Services, Inc. for the test year, which is the test 5 year ending December 31, 2002? 6 As shown on page 1 of Exhibit C of our Application, gross revenue would be 7 A. \$169,867.23 and net revenue would be \$10,749.68. 8 If the metered rate is established at \$26.25 for 5,000 gallons with a 9 Q. commodity charge at \$3.50 per thousand after 5,000 gallons, what would be 10 the income of Georgia Water and Well Services, Inc. for the test year? 11 As shown on page 2 of Exhibit C of our Application, gross revenue would be A. 12 \$153,847.23 and net revenue would be \$3,678.21. 13 Do you anticipate that Georgia Water and Well Services, Inc. will have any 14 Q. other sources of income? 15 No. We may have an occasional reconnect fee or tap fee, but those will be very 16 A. few. 17 Mr. Shoemaker, based on history, what have you projected to be the Q. 18 operating cost for the systems in 2003? 19 On a flat rate basis, it would be at least \$159,117.55, as shown on page 1 of 20 Α. Exhibit C, and on a metered basis, it would be at least \$150,169.02, as shown on 21

page 2 of Exhibit C. We are projecting less operating cost on a metered rate

22

1		because of less water used, thus, re	sulting in lowering	our utility and maintenance
2		costs.		
3	Q.	Refer to page 1 of Exhibit C. Ple	ase identify and de	escribe each of the South
4		Carolina expense and depreciati	on items the Comp	any has included and

23

A.

In 1993, when Georgia Water and Well Services, Inc. purchased Water Systems Inc., the fee was proposed by that company to be \$1,800 per month and this Commission accepted that approach and amount to be included in rates in its December 1989 Order. Consistent with that Order, we have had to raise that fee from time to time in order to cover the cost of services provided. The fee is now \$4,000 per month or \$2,000 to each of those companies, although this level is approximately \$900 per month below what the total pro rata costs actually are for services provided by Carson Plumbing and Repair Services Company, Inc. and Shoemaker Irrigation Company. In an effort, however, to consider the adverse rate impact on our customers, propose conservative accounting and rate adjustments, and share cost savings of running Georgia Water and Well Services, Inc. in this manner, we have not proposed any proforma adjustments in this Application to recoup these additional costs in our proposed rates. Similarly, we have not included other permissible adjustments, such as rate case expenses or a larger allowable operating margin, in order to keep our request to a minimum. By taking this approach, however, we are not waiving our taking a position on Commission Staff adjustments in its audit report herein.

Q. Mr. Shoemaker, what would be the net income, if you are granted the requested rate increases?

- 1 A. Net income with <u>flat</u> rates would be \$10,749.68, as shown on page 1 of Exhibit C
 2 and net income with <u>metered</u> rates would be approximately \$3,678.21, depending
 3 on the amount of water used by the customer.
- Q. Please explain the proforma adjustments to expenses you have included in
 your residential metered rate proposal.
- As shown on page 2 of Exhibit C, we have lowered utilities and Α. repairs/maintenance expenses by 20% (or a total of \$8,948.53) in proforma 7 adjustments to reflect expected lowered costs from metered service. Although 8 these lower amounts may not be viewed as know and measurable in the traditional 9 sense, we nevertheless believe they are achievable and are, therefore, proposing 10 them in order to have Commission approval to pass along savings to our 11 customers over time. We are also including a generous 5,000 gallons as our base 12 amount so this should cover the majority of households, unless someone has a 13 pool or waters his lawn a lot. These proposed amounts are the minimum Georgia 14 Water and Well Services, Inc. can operate the systems on and still pay off long-15 term and short-term debt incurred by upgrading the systems. 16

Q. What plans and costs do you propose for the future of these systems?

17

18

19

20

21

22

23

Α.

We propose to charge flat residential rates until all service is metered within a single subdivision and then begin charging the metered residential rates to every customer within that subdivision at the same time. We would then continue the conversion process in the next subdivision until conversion of all 4 of them.

While some residential customers would pay a flat rate and others paid a metered rate, all residential customers within a given subdivision would be paying a

21		capacity will be adequate in the future?
20	Q.	What steps has Georgia Water and Well Services, Inc. taken to ensure water
19	A.	No, not dry, but they all decreased in production during the drought.
8	Q.	Have you had any wells go dry?
17		normal levels.
16		year we have monitored our wells, and they have now basically returned to near
15		Pioneer Water Authority where possible to help with our shortage. Over the past
4		to ensure we had enough water for drinking and bathing. We also connected to
13		production capacity during that time. We had to impose water restrictions in order
2		had a major affect on our well production. Several of our wells lost 50% of their
1,	A.	Yes. Over the past several years we were in the middle of a serious drought that
0		past?
9	Q.	Has Georgia Water and Well Services, Inc. had water supply problems in the
8	Α.	Over 25 years. Most are over 25 years old and some are over 30.
7	Q.	Mr. Shoemaker, what is the average age of the wells in these systems?
6		cut-off valves as possible with new 2" square operating valves.
5		approximately \$25,000. Finally, we would also like to replace as many main line
4		Timberlake II to Pioneer Water Authority later for back-up water at a cost of
3		between \$91,000 and \$100,000. Next, we would like to connect Port Bass II and
2		customer, and we would have to borrow the money to accomplish it. It would run
1		metered rate simultaneously. This would cost us approximately \$200 per

We have added tanks to all of the systems and tied on to Pioneer Water Authority

where possible. We have also tried drilling deeper in some of our wells with no

22

23

A.

- success. Our plans are to connect Port Bass I and Port Bass II together so they
 both can be connected to Pioneer for back-up water and to connect Timberlake II
 to Pioneer, as soon as revenue is available. Currently, we are permitted for more
 taps in all our systems then we have on-line.
- 5 Q. Please describe Exhibits G and H of the Application.
- 6 A. Exhibit G is our most recent letter of approval of our System from DHEC and
 7 Exhibit H is our customer bill form.
- Q. (Move the introduction of the Application and supporting Exhibits into evidence.) Please summarize your testimony.
 - A. We are seeking an increase in rates, which is quite conservative under the circumstances, although we recognize the percentage increase from current rates is high. Since we have lost money for several years, we have had to seek relief before we can afford to convert our residential customers to metered service.

 Approval now of both flat residential rate and phased-in metered rates, as proposed by the Company, should enable the Company to provide improved service based upon measured water usage without having to seek a second phase of rate relief. If our current request is not granted in full, however, we will likely be forced to seek approval of a second phase of rate relief within the next year or so. We also have commercial customers and request appropriate metered rates and tap fees for providing service to them.
- 21 Q. Does this conclude your prefiled, direct testimony?
- 22 A. Yes.

Re:

Sanitary Survey Inspection

Port Bass I & II, Timberlake I & II

System Numbers 3750002, 3750012, 3750006 and 3750007

Oconee County

Dear Mr. Shoemaker:

Enclosed is a copy of the recent Sanitary Survey Inspection for the above-mentioned systems. An overall rating of Satisfactory was issued, however, be advised that the storage capacity at Timberlake II is considered to be insufficient by our standards. No action is required at this time because there have been no apparent pressure or quantity concerns but if it is determined in the future that there are problems then the storage capacity should be increased.

Thank you and your staff for your time and cooperation during the survey. If I can be of any assistance, do not hesitate to call me at (864) 260-5569.

Sincerely,

Christopher Eleazer

Drinking Water Program Manager
